Subject: SI and H Experimentations, 9 August 1951 (Rooms 20, 3, 8--  
6:00 to 9:00 PM).

On Thursday, 9 August 1951, Messrs. ~~\_\_\_\_\_~~, and the writer conducted experiments in SI and H between 6:00 and 9:00 PM with ~~\_\_\_\_\_~~ and ~~\_\_\_\_\_~~ as subjects and ~~\_\_\_\_\_~~ as observer.

A  
Since this was only the second effort in the H experiment, ~~\_\_\_\_\_~~ by pre-arrangement, attempted to secure SI control of both ~~\_\_\_\_\_~~ and ~~\_\_\_\_\_~~ by a very slow relaxing technique. This attempt was completely successful and both subjects were placed in a medium trance state. After some simple tests for depth, both subjects were returned to an awake state. Both subjects had good memory of all events and no attempts were made to produce amnesia.

The next test--again run by ~~\_\_\_\_\_~~ placed the subjects in a deeper trance state very rapidly. This time both subjects were given simple movements and some conversation. Both were instructed to have complete amnesia for this test and after awakening, both subjects had an almost complete amnesia.

The last test, run by ~~\_\_\_\_\_~~ placed both subjects in a deep trance very quickly. Subsequently, both were instructed to open their eyes, move about, and act "normally". Both subjects were good on these tests and showed strong progress. ~~\_\_\_\_\_~~ after giving protection instructions, awakened subjects. Both had total amnesia.

Comments:

Conditioning of ~~\_\_\_\_\_~~ and ~~\_\_\_\_\_~~ is progressing very well. It is believed that we can try extensive movements with both on next test.
